

⇒ JDBC:- Java Database Connectivity
→ JDBC API

→ Steps for DB connection

- ① load & register driver
- ② create connection
- ③ create statement
- ④ Execute SQL statements
- ⑤ Process the result
- ⑥ Close the connection

JDBC: Java Database Connectivity

- JDBC API
- Steps for DB connection:
 1. Load & register driver
 2. Create connection
 3. Create statement
 4. Execute SQL statements
 5. Process the result
 6. Close the connection

The diagram also illustrates the conceptual flow where a **Java App** uses a **Statement Truck** to travel across a **Road/Connection** to reach the **DB**, using a **Translator/Driver** to facilitate the connection.

C:- Java Database Connectivity

- JDBC API
- Steps for DB connection

- ① load & register driver →
- ② create connection →
- ③ create statement
- ④ Execute SQL statements
- ⑤ Process the result
- ⑥ Close the connections

download & add
mysql-connector.jar

```

class.forName("com.mysql.cj.jdbc.Driver");
Connection con = DriverManager.getConnection("url", "username", "pass");

```

url:- jdbc:mysql://localhost:3306/db.name

un:- root

pass:- root

- `ps.close();`
- `con.close();`
